Garrett Fleming
Terminal Operator
Bells Run Station Marine Terminal

Dear Garrett,

The Bells Run Station Marine Terminal is considered a covered marine transportation-related facility under the terms of the Federal Water Pollution Control Act, amended by the Oil Pollution Act of 1990 and the regulations established there under by the United States Coast Guard (USCG). As required by these regulations, Bells Run has developed a Facility Response Plan (FRP) for this site.

The FRP submitted identifies you as the Qualified Individual (QI) for Bells Run. As the QI, you have specific responsibilities in the event that a qualifying spill occurs. Under the terms of the regulations adopted by the USCG and as specified in 33 CFR 154.1026(c), I hereby give you full authority, upon the occurrence of a covered spill to:

1. Activate response resources identified in the plan and contract for additional response resources not identified by the plan, if these additional resources are found necessary.
2. Act as a liaison with the Federal On-Scene Coordinator
3. Obligate funds required to implement necessary response activities.

In the event that you are not available, Michael Williams, Gene McAlarney, Derrick Lamp, Ashleigh Strahler, Robert Douglas and/or Jakeb Elliott all have the authority outlined above.

This is an emergency authorization required by law, which is not restricted by company policy that limits your normal spending authority. This authorization only becomes effective upon the occurrence of such an event.

The authority granted herein is limited to carrying out planned responses and those emergency activities and expenses identified as reasonably necessary to clean-up the triggering spill. This authorization is not meant to confer any additional authority to enter into contracts to provide services to clean up spills prior to their occurrence. In those circumstances, normal company contracting practices and procedures are to be followed.

Sincerely,

A handwritten signature in black ink, appearing to read "Edwin Cormier".

Edwin Cormier
Vice President of Operations
